

FFmpeg Issue

FFmpeg was used before to remove the timestamp difference in DTS of Buffers occurred due to prerecording as initial buffers are removed .

Due to the Timestamp difference sometimes the video use to stuck at first frame

Command used for converting using ffmpeg -
ffmpeg -i filePath -c copy destination

Solution-

The solution for this is to make demuxer in gstreamer to ignore the timestamps of the buffer while demuxing it ,

So the command used to play the video -

Before:

**gst-launch-1.0 -v filesrc location=mayur.mp4 !
tsdemux ! h264parse ! decodebin ! kmssink driver-
name=tidss**

After:

**gst-launch-1.0 -v filesrc location=mayur.mp4 ! tsdemux
ignore-pcr=true ! h264parse ! decodebin ! kmssink
driver-name=tidss**
